

## Fly with a real stick!

The all new Flight Stick from TRC is the most unique instrument to fly your fixed wing or rotor wing aircraft.

It connects directly to your PC via USB and is recognized under Windows or MAC as a game device. No programming required, no special software to load. Immediately ready for use.

It can be mounted on the floor or (when you have a sophisticated setup), you can even built it into your flight simulator directly, by removing the lower part of the housing.

It has an 8-position HAT switch which enables you to look around the scenery.

You can assign the fire-buttons to any function in your Flight Simulator and there is even a Trim Wheel available!

Due to the professional Foam Grip, the Flight Stick has an excellent feeling.

### Features

- Multi-button programmable Grip: 8-way HAT switch, 4 pushbuttons and Trim Wheel
- Rugged and smooth Gimbals, internal system all made from stainless steel
- Heavy gauge aluminium enclosure with quality powder coated finish
