Product Summary

The 32 digital input controller is recognized under Windows as a standard Game Controller without any additional driver software.
This product is compatible with FSX/Prepar3d/DCS/X-Plane/MSFS and any other software which supports regular joysticks/gamepads.

Product Description

With this device you can interface 32 push buttons to any game that supports regular joysticks/game pads. In other words you can build custom button panels and interface them with this product.
This does not need any special software and the connected buttons can be defined within the Flight Simulator software of your choice. The 32-Digital Input USB controller has 4 dip switches to set its identification. Therefore you can connect up to 16 of these controller boards to your PC, offering a maximum of up to 512 push buttons which you can assign to a function within your flight simulator software. The push buttons can be connected via the screw terminals.
