Product Variants

- Throttle/Mixture/Prop Controller - USB ()
- Throttle/Mixture/Prop Controller - Ethernet (+ €50,-) ()

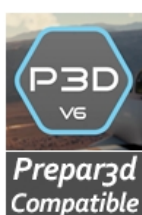

Product Summary

The USB Throttle Controller can be mounted with the Throttle, the Mixture and the Propeller adjust levers. It is ready to use and does not need any specific driver software.

There are two versions available. Like the name implies the USB version connects via USB to the PC.

The Ethernet version connects to the PC via Ethernet (network cable) and needs our software to interface with X-Plane.

The USB version is compatible with FSX/Prepar3d/DCS/X-Plane/MSFS and any other software which supports regular joysticks/gamepads. And the Ethernet version only supports X-plane.

(Only the USB version is compatible with Microsoft Flight Simulator)

Before adding this product to your basket, please select the version you want to purchase (USB or Ethernet):

Product Description

The USB Throttle Controller can be mounted with the Throttle, the Mixture and the Propeller adjust levers.

It is ready to use and does not need any specific driver software since it is a so-called HID device and is recognized in Windows and MAC computers as a game controller.

Just a matter of assigning the functions once in your popular flight simulator software and start using it!

The slide potentiometers have a travel of 60 mm. The PCB fits exactly behind the cut-outs for Throttle, Mixture and the Propeller adjust on the TRC472 panel.

The electronics are powered via the USB connection.

The USB Throttle Controller comes complete with USB cable to connect directly to your PC.

No programming, no special software to load, works instantly!
