Product Summary

The throttle is not a replica, but an original high quality throttle as used in light aircraft.

Product Description

The throttle is not a replica, but an original high quality throttle as used in light aircraft. (It is constructed according FAA regulations). The casing (from quality finished aluminum) has Teflon inner liner for low friction. Features stainless steel end fittings, swivel, and end rod. Furnished with FAA-style Black knob. Travel: 3-3/8".

The throttle comes with a 10Kohm slider potentiometer and necessary screws for mounting.
It can be connected to the SimKits CCU or can be used in any flight simulator environment.
The use of the Throttle/Mixture/Prop Adjust PCB is recommended. This PCB simplifies also the connection of the Flap Switch and Flap Indicator Servo to the CCU. See the "Controllers & Electronics Section".
