Product Summary

The USB ADF Indicator is a very precise replica of an original Automatic Direction Finder and can be used in simulated cockpits for General Aviation, Airliners and Jet Fighters.

Product Description

The USB ADF Indicator is a very precise replica of an original Automatic Direction Finder and can be used in simulated cockpits for General Aviation, Airliners and Jet Fighters.

The ADF Indicator contains a modified servomotor, which can turn continuously right or left to drive the Automatic Direction Finder pointer. The left dial allows you to indicate the position of the gyrocompass. Included in the instrument is an electronics board with a dedicated Microprocessor. This Microprocessor connects to your PC via the included USB cable. The instrument is equipped with lighting which can be regulated by the USB Light Regulation (separately available) or via software. Also a USB cable is included. It is constructed from high quality ABS and all parts are plastic injection molded for precise fit. The scale is high resolution print. Up to 2 pcs. of the same type of instrument can exist in a single panel setup, allowing you to build a full dual equipped instrument panel if needed. The "identity" of the product for the software drivers can be set by means of a switch on the back of the instrument.
