Product Summary

The USB controlled Altimeter is is a very precise replica of an original General Aviation Altimeter and has a double pressure scale for Inches (as used in the USA and UK) and Millibar (as used a.o. in other countries in Europe).

Product Description

The USB or Ethernet controlled Altimeter is is a very precise replica of an original General Aviation Altimeter and has a double pressure scale for Inches (as used in the USA and UK) and Millibar (as used a.o. in other countries in Europe). The Altimeter has 3 indicators: a 100-feet pointer, a 1000-feet pointer and a 10,000-feet indicator disc. The Altimeter pointers are driven by a special, modified servomotor which is able to run continuously.

You can regulate the air pressure scale by means of a dial on the lower left hand side of the instrument.

Included in the intrument is an electronics board with a dedicated Microprocessor. This Microprocessor connects to your PC via the included USB cable. The instrument is equipped with lighting which can be regulated by the USB Light Regulation (separately available) or via software. Also a USB cable is included.

It is constructed from high quality ABS and all parts are plastic injection molded for precise fit. The scale is high resolution print.

Up to 2 pcs. of the same type of instrument can exist in a single panel setup, allowing you to build a full dual equipped instrument panel if needed. The "identity" of the product for the software drivers can be set by means of a switch on the back of the instrument.

The ethernet version of the Altimeter is specifically designed for X-Plane. The USB version of the Altimeter is to be used with prepar3D.

Product Attributes

- Dimensions: N/A
- Weight: 07 kg
- NEW!: test nieuw!!!!
- Connection; USB or Ethernet:: USB, Ethernet (+ €25,-)
