Product Summary

The USB Light Regulation unit is especially designed to regulate the light of the new series of USB Aircraft Gauges.

Product Description

The USB Light Regulation unit is especially designed to regulate the light of the new series of USB Aircraft Gauges. It has its own microprocessor which reads the potentiometer knob position and passes this value through to the USB

gauges via software.

The USB Light Regulation unit comes complete with a USB cable and can be switched to 4 different identities via a dipswitch. Therefore you can create up to 4 groups of light control for the USB Aircraft Gauges.

It comes complete with knob and can be mounted in a panel up to 2,5 mm. thick. The USB Light Regulation unit needs a panel hole of 9 mm. diameter.

The USB Light Regulation unit can be connected to a free USB port on your PC or to your PC via a USB HUB.

The product is build and tested and ready to use!
